

Following are the steps listed to download and import Xseeker OSINT machine into VMBox

Download Xseeker OVA File:

Download the Xseeker OVA file following this link:

<https://mega.nz/folder/97MjxQ5T#y4DO2yIFZdiyJ1Neg49k-g>

Download and Install VirtualBox:

Make sure you have VirtualBox installed on your computer. If not, download and install it from the official VirtualBox website: <https://www.virtualbox.org/>

Open VirtualBox:

Launch the VirtualBox application on your computer.

Import the OVA File:

Go to the "File" menu.

Select "Import Appliance."

Choose the OVA File:

Click on the "Open Appliance" button.

Navigate to the location where you downloaded the OVA file and select it.

Review Appliance Settings:

Once you've selected the OVA file, you will see information about the virtual machine.

Review the settings to ensure they match your preferences.

Import the Virtual Machine:

Click on the "Import" button to start the import process.

Wait for Import to Complete:

VirtualBox will begin importing the virtual machine. This may take some time, depending on the size of the OVA file and your computer's performance.

Configure Virtual Machine Settings (if needed):

After the import is complete, you may need to configure certain settings for the virtual machine, such as the amount of RAM, number of CPU cores, etc. This can be done by selecting the virtual machine in the VirtualBox Manager and clicking on "Settings."

Start the Virtual Machine:

Once everything is set up, select the virtual machine in the VirtualBox Manager.

Click on the "Start" button to launch the virtual machine.
